

Special offer: 25% off!

KASPERSKY SECURITY FOR VIRTUALIZATION

Kaspersky lab provides award-winning security for 270,000 organizations around the world. Choose the right protection for your virtual environment:

AGENT-BASED SECURITY

Kaspersky Lab provides superior, flexible and efficient protection for your virtual server and desktop environments.

- Centralized management via Kaspersky Security Center
- Centralized SVA based VM protection
- Advanced threat protection including Automatic Exploit Prevention
- Virtual network protection including HIPS, firewall and Network Attack Blocker
- Endpoint controls for applications, web access and peripherals
- Cloud-assisted security via Kaspersky Security Network
- Antivirus and anti-phishing for IM, mail and Internet traffic
- No additional installation or reboots for new VMs*

AGENTLESS SECURITY

Through our agentless security configuration, all security activity is concentrated in the Security Virtual Appliance, interfacing with vShield for instant automatic virtual machine protection and with vCloud for network protection.

- Antivirus
- Network Attack Blocker

LIGHT AGENT SECURITY

Our powerful but lightweight agent is deployed on each virtual machine, allowing for the activation of advanced endpoint security features:

- Vulnerability monitoring
- Application, device and web controls
- Antivirus protection for instant messaging, mail and web

*Persistent VMs featuring a light agent are protected as soon as the light agent has been installed.

**Virtualization security your business needs at
